Agenda:

1. Graduate and Professional Tuition
2. CAPS and Health Fee Update

Graduate and Professional Tuition

- Graduate base tuition rates resident and non-resident for all campuses are the same rate
- Other areas besides base Cascade has slightly lower tuition
- Pharmacy and MBA program most likely will increase tuition 3% but those conversations haven’t finished yet.
  - Used to be a lot of demand for Pharmacy, now that is flattening
- Vet Med is looking to be a little higher at 4% mostly due to demand and the new building
- Vet Med students struggling with jobs after college. The 1st 10-years are difficult.

Discussion:

- Reduced (compared to peers) graduate tuition was a huge draw for one of the students on the SBAC. Corvallis is not considered a big metropolis but the tuition being so much less made the decision an easy one.
- Is that a tactic? Keep graduate tuition low, and hope for increased enrollment?
  - Non science disciplines have more of an opportunity to grow with that tactic.

E-Campus

- Non-resident tuition increase 4 ½% bring closer to peers
- Resident tuition increase approx. 2%

Don’t have a lot of graduate programs online and the ones that are, are nationally priced all over the board. Not consistent. Very market driven.

Discussion:

- One student said that E-Campus is seen as a “good deal” especially for first generation students.
- Do we know what the measured capacity is for E-Campus?
  - Graduate and Professional want 20% - but is that still a good number?
  - Every college is reviewing their capacity now.
- Standard load for a professor in E-Campus?
  - Big class sizes can still be a problem for E-Campus teaching since there are still papers to grade.
- Physical space might be okay on campus but faculty space for certain students is still a challenge. How many students can faculty oversee?
- Value proposition in E-Campus? Based on market demand.
- What about hybrid courses?

CAPS and Health Fee Update
Hope to invite Jenny Haubenreiser and Ian Kellum to the January SBAC meeting. Haven’t heard yet on the increase but most likely will have another large request for CAPS this year.

**Discussion:**

**Student Health Services**

No issues or concerns with Student Health Services.

**Counseling and Psychiatric Services:**

Psychiatry is in need, community based problem and there are not a lot of alternatives in the community.

According to one student, it is a 10-week wait for CAPS services. Would like to know why the wait times are still so long.

Sherm – should this still be a fee funded area or should this be part of tuition? When this started, it made sense to be fee funded, but now times have changed does it still make sense?

**ATTENDEES:**

Samuel Burns  
Mahal Miles  
Jensen Woods  
Peter Boyd  
Lana Klipfel  
Michaela Canete  
Jen Martin

**NEXT MEETING – January 13, 2020**
