PUNCH-OUT NOT RESPONDING PROPERLY

The Newegg Punch-out requires that you allow both secure and unsecure (pictures) data to be displayed. Therefore you may need to adjust your settings on your browser before you can order from Newegg. Below are the three most common browsers used and a quick guide on how to proceed. If you want to make permanent setting changes please contact your IT ServiceDesk and ask for assistance to allow mixed content for OSU BennyBuy punch-outs.

GOOGLE CHROME UNSAFE SCRIPTS

Google Chrome users may experience an issue when accessing the punch-out. If the punch-out appears stuck while loading check the browser URL bar for a gray shield icon as seen below. Click the icon and select “Load unsafe scripts”.
INTERNET EXPLORER UNSAFE SCRIPTS

Internet Explorers users may experience a distorted view with a warning message at the bottom. You will need to select the “Show all content” button to correct the display.

Depending on the version of your browser this message may appear in other areas or cause a popup box to appear. You want to ALLOW mixed content or SHOW all content.

Firefox users may experience a punch-out that does not respond to initial search results. If this is the case you may need to disable blocking. At the top to the left of the URL you will see a icon. Click on this icon, Click on the Drop down area next to Keep Blocking and select Disable Protection on this page.
